

Canine Health Assessment

Typically, most dogs enter their 'senior' years between the ages of 5 & 9 (depends on breed, age, lifestyle & health). This is when you should start to look out for signs of arthritis.

Take our canine health quiz and find out if your dog could be suffering in silence.

Mobility

Does your dog take more time when getting up from a rest?

Yes/No []

Do they appear to be struggling going up or down stairs?

Yes/No []

Does your dog struggle to get on and off the settee or bed?

Yes/No []

Do they seem 'stiff' doing sit-to-stands or vice versa?

Yes/No []

Walking

Is your dog regularly lagging behind on walks?

Yes/No []

Does your dog take more breaks or refuses to walk?

Yes/No []

Demeanour

Is your dog often more irritable than usual?

Yes/No []

Do they growl or snap when being handled?

Yes/No []

Do they interact less with you and other pets?
